

RIGID PENDANT

Description

Rigid pendants are intended to distribute medical gases, AGSS and electrical services to the operating table/anaesthetic machine whilst leaving the surrounding area free from trailing hoses and cables. It offers the hospital planning staff opportunity to specify at time of order the type, quantity and placement of outlets to suit individual requirements.

Rigid pendants are ceiling mounted fixed columns complete with first fix plate and ceiling shroud.

A maximum of 6 medical gas and AGSS terminal units, complete with hose assemblies, can be accommodated within each pendant.

Each pendant can accommodate a maximum of 6 electrical sockets.

Other specialist outlets such as data sockets, equipotential sockets, etc. can be incorporated into the pendant as required.

Designed to meet the requirements of ;
HTM 2022:1997-Medical Gas Pipeline system
C11-NHS Estates Model Engineering Specification
